AVALL Audio Visual Support System: humanising technology in the workplace

Colebrook Bosson Saunders' AVALL is a new generation of large screen supports with integrated hardware storage and cable management. Available in wall mounted and free standing versions, AVALL can support one or two screens of up to 50" in portrait or landscape format. AVALL is ideal for video conferencing, exhibition displays, corporate presentations and digital signage. Its versatile panels can also be customised with company logos and graphics to complement the design of any indoor space.

AVALL is a system designed as an interface to integrate the product (the AV technology) with people and facilitate the product being used in a more effective and ergonomic way. Colebrook Bosson Saunders (CBS) collaborated with industry leaders in screen manufacture, renowned software and equipment integrators, as well as global video conferencing equipment suppliers to understand the real needs and coming trends of the technology to be housed. CBS has developed the product with extensive live trials within video conferencing environments, digital signage applications and exhibition environments gaining feedback from each situation and adapting the system to suit these divergent needs.

AVALL is a truly ergonomic product, addressing all the needs and constraints of a real working environment:

- Starting with supply and assembly considering all aspects of the needs of the integrators of the equipment
- The people who will use the technology (ease of use, height of equipment)
- The environment / buildings in which the products are used
- The technology to be housed and managed
- The commercial needs of the organisation (promoting the company's brand)
- Future-proofing and security

The unit is designed with integrated hardware storage to hide all the electronics seamlessly inside the column. CBS incorporated into the design of AVALL cover panels that are easily detachable. These significantly help the user with both integration of other devices and also maintenance of the technology contained.

The AVALL system was developed to humanise users' and installers' experience of video conferencing and digital presentations.

Note to editors:

Colebrook Bosson Saunders (CBS Products) design and manufacture innovative and elegant solutions that create space and comfort for people in a wide range of application areas. As technology develops at an ever increasing rate, so too do the opportunities to create stylish products to make that technology more meaningful to people's lives.

CBS's award winning products bridge the gap between furniture and technology, giving people the space and freedom to live and work in an environment designed around them. Through extensive expertise in ergonomics CBS create adjustable work spaces that promote a healthy and productive working environment.

CBS has a truly global presence; with offices in Europe, the USA, Australia and Japan, supporting a world-wide network of manufacturers, dealers and distributors.
